OBSERVATION INFORMATION

Species	Date(s) Observed	Spawning	Rearing	Present	Anadromous
Coho salmon	8/10/01		46		<input checked="" type="checkbox"/>
Cutthroat trout	8/10/01		13		<input checked="" type="checkbox"/>
Dolly Varden char	8/10/01		36		<input checked="" type="checkbox"/>
					<input type="checkbox"/>
					<input type="checkbox"/>

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments: Fish captured with Gee minnow traps baited with disinfected salmon eggs, 1-2 hour soak time. Trap coordinates and waterbody location determined by GPS - Garmin XL12 w/external antenna, averaged to <30' position error. Cutthroat trout and Dolly Varden char captured in vicinity upstream of upper limit of coho salmon trapped. No barriers detected between coho and trout and char or upstream. Current Atlas is inaccurate - the location of the waterbody and upper and lower limits are not correct.

No traps set above upper limit
